Application for an account on the Gateway Computing Cluster and User Agreement on software policies

Applicant Information	
* Name	
* Surname	
* EUROfusion beneficiary	
further details *please specify institute name, country (for applicants not employed by EUROfusion beneficiaries)*	
Contact Information	
* e-mail	
* phone	
address	
Account Information	
* Requested account type	
Involvement within EUROfusion activities *please Work Packages / Projects you are involved to*	
Codes / Tools planned to be used	
*Other information *please give indications of planned activities*	

☐ *** I agree with the terms of Gateway access (<u>Annex</u>:)**

Place and Date	Signature

signed by Applicant

Please print this form, sign it and send it to the PMU Coordination Officer by email:
(Denis Kalupin: **Denis.Kalupin@EURO-fusion.org**).

Approval of account by PMU:

Place and Date	Signature

approved by PMU Coordination Officer

Annex: Gateway access & User accounts

The Gateway is a joint computing resource available to all EUROfusion members for the development and/or use of EUROfusion software. The purpose of the Gateway is to provide a common environment for both the continuous development of the EUROfusion Modelling platform in IMAS and for the use of the Modelling software for analysis and modelling. The Gateway hosts the software repositories and acts as a user access point to relevant simulations and EUROfusion data bases as well as the entry point to a wider range of computing resources.

Access to the code repositories and data is structured according to the status of the software and the profile of the user. Three levels of Gateway user status are possible:

DEVELOPER individual contributing to the development of codes / workflows / integrated modelling platform (IMAS, whose contribution is formalised in the EUROfusion CONSORTIUM work programme. DEVELOPERs have access to the project software development repositories, to the public release repository, private and public databases and integrated modelling webpages at https://users.euro-fusion.org/iter-physics-department/cd-isa/

USER individual not directly involved in the development of codes but actively using the WPCD tools and EUROfusion databases for physics studies. This category of users has access to the WPCD public release repository, private and public data bases and integrated modelling webpages at https://users.euro-fusion.org/iter-physics-department/cd-isa/

EXTERNAL individual not directly involved in the development or use of integrated modelling tools. This category of users has access to a limited number of publically released training tools and parts of integrated modelling webpages at https://users.euro-fusion.org/iter-physics-department/cd-isa/

A User from any of above categories:

- has to respect the license agreement for the software developed within the EUROfusion CONSORTIUM;

- is aware that for some software additional requirements may apply if so explicitly stated;

- in case of contributing software to the repository, he/she will take necessary measures in order to inform other developers or users on any limitation of use due in particular to existing third parties' rights on the contributed software. He/she will also inform of the parts of software falling under Open Source Licenses;

- will not install or run any software on the Gateway computing cluster which cannot be directly attributed to his/her role as a **developer** or **user**;

- understands that User access to the Gateway is granted through individual accounts that cannot be transferred or shared.

Access rights to the Gateway computing cluster may be revoked if a user is found to be in breach of the terms of the user agreement as set out in this document.
